

Dassault Systemes ORTEMS APS

PowerPoint Introduction of the Solution

1. Introduction: ORTEMS APS

Overview of the Solution Introduction

Dassault Systemes' DELMIA Ortems APS (Advanced Planning and Scheduling)

is an advanced software that innovatively improves the production planning and scheduling of manufacturers.

The goal of this introduction is to comprehensively analyze the technical characteristics of the ORTEMS APS,

management benefits,

real application cases,

and market competitiveness, and to organize them into effective PowerPoint presentation materials.

In particular, we aim to balance technical understanding and management value by focusing on end-to-end production optimization functions through integration with Dassault Systemes' 3DEXPERIENCE platform and AI-based decision support systems.

2. ORTEMS APS

Overview and Background of the Solution

2.1

Definition and Historical Background of the Solution

DELMIA Ortems APS

is a production planning and scheduling software that has been continuously developed since Dassault Systemes acquired it in 2016.

This solution provides manufacturers with the ability to establish optimal production plans even in complex production environments, monitor production situations in real time, and simulate various scenarios.

In particular, it has shown excellent effects in improving delivery compliance and reducing inventory in finite capacity production environments[1-5][1-9].

2.2

Dassault Systemes' Technical Skills and Position in the Market

Dassault Systemes holds a leading position in the global 3D design and engineering software market, and ORTEMS APS

is establishing itself as a key solution supporting the digital transformation of the manufacturing industry based on these technical skills. ORTEMS is used in various industries such as aerospace, automobiles, industrial equipment, and packaging, and has more than 16,000 users in 60 countries. Global companies such as GE Power, Heineken, Merck Serono, Thales are actively using this solution for production operation management[2-1].

2.3 Integration with 3DEXPERIENCE Platform

After Dassault Systemes' acquisition, ORTEMS was integrated with DELMIA Quintiq (supply chain planning) to provide end-to-end production optimization functions on the 3DEXPERIENCE platform.

This enhances the linkage between virtual design and physical production, enabling the construction of smart factories. The 3DEXPERIENCE platform supports linkage with existing systems such as ERP, MES/MOM based on a single data model, supporting the planning, execution, and optimization of global industrial operations on a single platform[4-1][4-3].

This document was generated by LG AI Research's AI model (EXAONE).

September 19, 2025

[Context from previous section: g the planning, execution, and optimization of global industrial operations on a single platform[4-1][4-3].

This document was generated by LG AI Research's AI model (EXAONE).

September 19, 2025

---]

1. ORTEMS APS

Key Technologies and Features

3.1

Artificial Intelligence-based Decision Support System

The most critical technical feature of ORTEMS APS is its artificial intelligence-based decision support system.

This system optimizes complex production plans and establishes the optimal production schedule considering various constraints.

In particular, through constraint-based optimization, it provides unlimited "what-if" simulations, real-time modifications, and impact analysis, thereby supporting production managers to make optimal decisions in various situations[1-5][4-1].

3.2

Real-time Monitoring and Simulation Features

ORTEMS APS continuously monitors the situation on the production site in real-time and adjusts the production plan based on this.

Also, through its simulation feature, it can compare various scenarios, pre-validate the effects of the production plan, and establish the optimal plan.

These features provide the ability to flexibly respond in rapidly changing production environments[1-5][1-9].

3.3

Constraint-based Optimization

The constraint-based optimization feature of ORTEMS APS establishes the optimal production schedule considering various constraints (equipment capacity, manpower, materials, delivery dates, etc.) during the production planning process.

This feature is particularly effective in improving delivery compliance and reducing inventory in finite capacity production environments.

According to the technical white paper, when introducing APS, there were reported cases of efficiency improvements such as a 25% reduction in machine setup time and a 50% reduction in cycle time[2-3][4-1].

3.4

Data Integration and Collaboration Features

ORTEMS APS supports linkage with existing systems such as ERP, MES/MOM through the 3DEXPERIENCE platform.

Through this, it can manage the data needed for production planning in an integrated manner and promote collaboration among various stakeholders.

For example, Airbus Helicopters integrated SAP ERP and ORTEMS to manage everything from sales planning to daily production operations with a single tool, improving delivery compliance[4-3].

4. ORTEMS APS

Managerial Benefits

4.1

Improvement in Production Efficiency

By introducing ORTEMS APS, companies can greatly improve production efficiency.

According to the technical white paper, when introducing APS, there were reported cases of efficiency improvements such as a 25% reduction in machine setup time and a 50% reduction in cycle time[2-3].

Such efficiency improvements lead to cost savings and productivity improvements, contributing to enhancing the competitiveness of the company.

This document was generated by LG AI Research's AI model (EXAONE).

September 19, 2025

4.2

Improvement in Delivery Compliance and Reduction in Inventory ORTEMS APS

is effective in improving delivery compliance and reducing inventory in a finite capacity production environment[1-5][1-9].

Especially, by establishing the optimal production schedule considering various constraints through constraint-based optimization functions,

you can improve the delivery compliance.

Also, by optimizing the inventory level through real-time monitoring and simulation functions,

you can reduce inventory costs.

4.3 ROI

and Cost Saving Effects

Through the introduction of ORTEMS APS,

companies can achieve various cost-saving effects.

According to the technical white paper, when APS is introduced, there are reports of efficiency improvements such as a 25% reduction in machine setup time,

and a 50% reduction in cycle time[2-3].

Such efficiency improvements lead to production cost savings,

which can improve the return on investment (ROI).

4.4

Strengthening Competitiveness through Digital Transformation ORTEMS APS

supports a company's digital transformation,

contributing to strengthening its competitiveness.

Especially, by integrating with the 3DEXPERIENCE platform, it strengthens the linkage between virtual design and physical production, and enables the construction of smart factories[4-1][4-3].

Through this, companies can realize competitiveness enhancement through digital transformation.

5.

Customer Success Stories

5.1 DIXI Polytool Case

DIXI Polytool in Switzerland

introduced DELMIA Ortems for the optimization of production planning in a 24/7 operating factory.

The company was able to set reliable production goals by linking ERP data and APS, and improved the delivery rate of standard products within 24 hours[2-2].

Also, by monitoring machine load and capacity,

it maximized the efficiency of equipment utilization and achieved the effect of shortening production lead time[2-2].

5.2 Airbus Helicopters Case

Airbus Helicopters

integrated SAP ERP and ORTEMS to manage everything from sales planning to daily production operations with a single tool, improving delivery compliance[4-3].

Through this, it secured the consistency of production planning,

and was able to adjust production plans by understanding the situation of the production site in real time.

5.3 GDC Technics Case

GDC Technics

achieved digital continuity by managing aircraft modification work and certification agency requirements simultaneously using the 3DEXPERIENCE platform[4-7].

This is a case showing that the integration effect of the platform extends from supply chain planning to production execution.

5.4

Other Global Corporate Application Cases

ORTEMS

is being used in various industrial fields such as aerospace, automobiles, industrial equipment,

packaging, and global companies such as GE Power, Heineken, Merck Serono, Thales are using this solution for production operation management.

This document was generated by LG AI Research's AI model (EXAONE).

September 19, 2025

They are actively using it [2-1].

Various application cases in these industries are evidence that proves the versatility and effectiveness of ORTEMS APS.

6.

Market Competitiveness Analysis

6.1

Differentiation factors compared to competitors

ORTEMS APS

is differentiated from competitors in that it provides end-to-end production optimization through integration with Dassault Systemes' 3DEXPERIENCE platform.

In particular, through integration with DELMIA Quintiq (supply chain planning), it strengthens the linkage between virtual design and physical production, and enables the construction of smart factories [4-1][4-3].

Also, it has competitiveness in that it can establish the optimal production plan even in complex production environments through an AI-based decision support system and

constraint-based optimization function.

6.2

Industrial applicability

ORTEMS APS

is being used in various industries such as aerospace, automotive, industrial equipment, and packaging [2-1].

Especially because it is effective in improving delivery compliance and reducing inventory in complex production environments, it has high applicability in various industries.

6.3

Position in the global market

ORTEMS

has more than 16,000 users in 60 countries, and global companies such as GE Power, Heineken, Merck Serono, Thales are actively using this solution for production operation management [2-1].

This is evidence that ORTEMS APS is in a leading position in the global market.

7.

PowerPoint slide composition plan

7.1

Overall slide composition and flow

It is effective to compose the ORTEMS APS solution introduction PowerPoint in the following flow:

1.

Cover slide: Solution name, subtitle, Dassault Systemes logo, presenter information

2.

Table of contents slide:

Present an overview of the entire content

3.

Solution overview: Definition, background, and market position of ORTEMS APS

4.

Key technologies and features:

AI-based decision support, real-time monitoring, constraint-based optimization, etc.

5.

Management benefits:

Improvement in production efficiency, improvement in delivery compliance, cost-saving effects, etc.

6.

Customer success stories: DIXI Polytool, Airbus Helicopters, GDC Technics, etc.

This document was generated by the AI model (EXAONE) of LG AI Research.

September 19, 2025

1.

Market Competitiveness Analysis:

Differentiating factors compared to competitors,

Potential applicability in various industries,

Position in the global market

8. Integration with 3DEXPERIENCE platform:

End-to-end production optimization,

Real-time decision-making support,

Data integration

and enhanced collaboration, etc.

9.

Implementation Effects and ROI:

Quantitative effects,

Considerations upon implementation

10.

Conclusion and Suggestions: Summary,

Inquiry and support information for implementation

This flow is structured to systematically convey from the overview of the solution, technical characteristics, managerial benefits, actual application cases, market competitiveness, to the effects of implementation.

7.2

Section-by-section Slide Design Guide

For effective slide design for each section, we provide the following guide:

7.2.1

Solution Overview Section

Design Concept:

Professional and trustworthy design reflecting Dassault Systèmes' brand identity

Color Composition:

Maintaining brand consistency by utilizing Dassault Systèmes' official colors (blue, **gray, etc.)**

Visual Elements: ORTEMS APS

logo, a diagram visualizing the integration with the 3DEXPERIENCE

platform

Text Composition:

Concisely and clearly convey the definition, background, and position in the market of the solution

7.2.2

Key Technology and Function Section

Design Concept:

Visually represent technical characteristics for easy understanding

Color Composition:

Use of accent colors to emphasize technical characteristics (e.g.,

AI functions are blue,

real-time monitoring is green, etc.)

Visual Elements:

Diagrams visualizing features such as AI-based decision-making support, real-time monitoring,

constraint-based optimization, etc., flowcharts

Text Composition:

Concisely and clearly convey the features and advantages of each function

7.2.3

Managerial Benefits Section

Design Concept:

Visually represent managerial benefits for intuitive understanding of the effects

Color Composition:

Use of accent colors to emphasize effects such as efficiency improvement,

cost reduction, etc. (e.g.,

efficiency improvement is green,

cost reduction is red, etc.)

Visual Elements:

Graphs, charts visualizing effects such as 25% reduction in machine setup time,

50% reduction in cycle time, etc.

This document was generated by the AI model (EXAONE) of LG AI Research.
September 19, 2025

-

Text composition:

Concisely and clearly convey the characteristics and effects of each benefit

7.2.4

Customer Success Story Section

Design concept:

Convey the effects of the solution intuitively through actual application cases

Color composition:

Enhance trust by using each company's brand color

Visual elements: Images, graphs visualizing success stories of DIXI Polytool, Airbus Helicopters, GDC Technics, etc.

Text composition:

Concisely and clearly convey the background of each case, the effects of introduction, and the results

7.2.5

Market Competitiveness Analysis Section

Design concept:

Visually express the differentiating factors compared to competitors to intuitively understand competitiveness

Color composition:

Use of accent colors to emphasize differentiating factors compared to competitors

Visual elements:

Diagrams, charts visualizing differentiating factors compared to competitors, applicability in various industries, position in the global market, etc.

Text composition:

Concisely and clearly convey the characteristics and advantages of each element

7.2.6 3DEXPERIENCE

Integration with the platform section

Design concept: 3DEXPERIENCE

Visually express integration with the platform to intuitively understand end-to-end production optimization

Color composition: 3DEXPERIENCE

Maintain consistency by using the brand color of the platform

Visual elements:

Diagrams, flowcharts visualizing features such as end-to-end production optimization, real-time decision-making support, data integration and collaboration enhancement, etc.

Text composition:

Concisely and clearly convey the characteristics and advantages of each feature

7.2.7

Introduction Effects and ROI Section

Design concept:

Visually express the introduction effects and ROI to intuitively understand the return on investment

Color composition:

Use of accent colors to emphasize the introduction effects and ROI

Visual elements:

Graphs, charts visualizing the introduction effects and ROI

Text composition:

Concisely and clearly convey the characteristics and advantages of the introduction effects and ROI

This document was generated by the AI model (EXAONE) of LG AI Research.
September 19, 2025

7.3

Data Visualization Strategy

For effective data visualization, the following strategies can be utilized:

1.

Use of visualization techniques in historical cases:

Like the map of Napoleon's march route, the size of the troops can be represented by the thickness of the line, and environmental impacts can be combined like a temperature graph to show the standard of narrative data delivery[3-2].

For example, the change in production efficiency before and after the introduction of ORTEMS APS can be expressed as a line graph, and the magnitude of each indicator's change can be represented by the thickness of the line.

2.

Effective chart type

In technical solution distribution), and data patterns[3-7].

These types of charts

3.

Infographics (resource
represent complex

the features and

Use of infographics: Emphasizing a company's IT challenges such as IT security, lack of expertise, etc., using infographics[3-8].

The problems of production planning and schedule management that ORTEMS APS can solve can be represented intuitively using infographics.

4.

Step-by-step visualization: The RPA 30-60-90 day execution plan can be visualized step by step using a cube diagram to enhance understanding and execution[3-18][3-8].

The introduction process and effects of ORTEMS APS can be visualized step by step for easy understanding.

7.4

Layout for Effective Message Delivery

For effective message delivery, the following layout strategies can be utilized:

1.

Limit to 1-2 key messages per slide:

To convey complex content concisely, limit the key messages to 1-2 per slide.

2.

Use of visual hierarchy:

Adjust the size, color, and position of text and visual elements according to importance to create a visual hierarchy.

This document was generated by the AI model (EXAONE) of LG AI Research.

September 19, 2025

1.

Use of consistent design elements:

Across the entire slide, consistent design elements (color, font, icons, etc.) are used to provide a sense of unity.

4.

Storytelling structure:

The structure of storytelling is used in the flow of problem identification → solution proposal → effect explanation → success case → conclusion.

5.

Balance between data visualization and text:

The balance between data visualization and text is adjusted to make it easy to understand visually and to supplement with text explanations.

8.

Detailed composition for each slide

8.1

Cover Slide

- Title: "Introduction to Dassault Systemes DELMIA Ortems APS Solution"
- Subtitle: "Innovation in production planning and scheduling through digital transformation"
- Visual elements: Dassault Systemes logo, ORTEMS APS logo, 3DEXPERIENCE platform logo
- Design: A professional and trustworthy design reflecting the brand identity of Dassault Systemes
- Color scheme: Using the official colors of Dassault Systemes (blue, gray, etc.) to maintain brand consistency

8.2

Table of Contents Slide

- Contents: 1. Solution Overview, 2. Key Technologies and Features, 3. Management Benefits, 4. Customer Success Stories, 5. Market Competitiveness Analysis, 6. Integration with the 3DEXPERIENCE Platform, 7. Implementation Effects and ROI, 8. Conclusion and Suggestions

- Design: Each section is visually distinguished for intuitive understanding
- Visual elements: Use of icons or images representing each section
- Text composition: Deliver the table of contents concisely and clearly

8.3

Solution Overview Slide

- Title: "Overview of DELMIA Ortems APS Solution"
- Content:
 - Solution definition: "DELMIA Ortems APS is a solution that optimizes complex production plans through an AI-based decision support system, continuously monitors the production site situation through real-time monitoring and simulation, and establishes the optimal production schedule through constraint-based optimization."

8.10

Conclusion and Suggestion Slide

- Title: "

Conclusion and Suggestions"

- Content:

- Summary: "DELMIA Ortems APS is a solution that optimizes complex production plans through an AI-based decision support system, continuously monitors the production site situation through real-time monitoring and simulation, and establishes the optimal production schedule through constraint-based optimization. It provides end-to-end production optimization features through integration with the 3DEXPERIENCE platform and is being used in various industrial fields."

- Suggestion: "

Companies can consider introducing DELMIA Ortems APS to improve the efficiency of production planning and scheduling, improve delivery compliance, and reduce inventory."

**Introduction inquiry and support information:
"For detailed information or inquiries about DELMIA Ortems APS, please contact the Dassault System official website or sales representative."**

Visual elements:

Dassault System logo, contact information, etc.

- Design:

Concisely and clearly deliver conclusions and suggestions

Color composition:

Maintain brand consistency by using Dassault System's official colors (blue, gray, etc.)
9.

Points to note when creating PowerPoint
9.1

Maintain visual consistency

Brand Identity:

Maintain a design that reflects Dassault System's brand identity.

This document was generated by the AI model (EXAONE) of LG AI Research.
September 19, 2025

-

Color Scheme:

Use the official colors of Dassault System (blue, gray, etc.) to maintain brand consistency.

- Font:

Use the font recommended by Dassault System to maintain consistency.

- Icons and Images:

Use icons and images of consistent style to provide a sense of unity.

9.2

Clarity and Conciseness of Information

- Limit to 1-2 key messages per slide:

To convey complex content concisely, limit the key messages to 1-2 per slide.

- Utilize Visual Hierarchy:

Adjust the size, color, and position of text and visual elements according to their importance to create a visual hierarchy.

- Balance between Data Visualization and Text:

Balance data visualization and text to make it visually easy to understand and supplement with text explanations.

9.3

Storytelling Structure

- Flow of Problem Statement → Solution Presentation → Effect Explanation → Success Cases → Conclusion:

Use a storytelling structure to naturally convey the content.

- Connectivity of Each Section:

Structure each section to naturally connect, maintaining the overall flow.

- Consistency of Message:

Deliver a consistent message throughout the presentation.

10. Conclusion

The Dassault System ORTEMS APS PowerPoint introduction should be structured to systematically convey everything from an overview of the solution to its technical characteristics, managerial benefits, actual application cases, market competitiveness, and the effects of introduction. In particular, it is important to balance the technical understanding and managerial value by focusing on the end-to-end production optimization function through integration with Dassault System's 3DEXPERIENCE platform and the AI-based decision support system.

To create an effective PowerPoint, it is necessary to maintain visual consistency, ensure clarity and conciseness of information, and utilize a storytelling structure. Also, balance data visualization and text to make it visually easy to understand and supplement with text explanations.

A PowerPoint introduction to the ORTEMS APS solution, created based on these structures and strategies, will effectively convey Dassault System's technological prowess and market position, and balance the technical characteristics and managerial benefits of ORTEMS APS, helping potential customers intuitively understand the value of the ORTEMS APS solution and consider its introduction.
